Nascita di un progetto

Birth of project

Quando l'azienda mi ha chiamato per chiedermi di progettare un lavabo, non ha chiesto nulla di più. Una sfida importante, perché non c'è cosa più complessa che progettare senza condizioni.

Un oggetto funzionale... di ceramica... anche se di questo si trattava, progettare senza conoscere il senso di ciò a cui dovevo dare una forma era molto difficile. Ho iniziato con il chiedermi cosa fosse per me un lavabo, quale fosse il suo utilizzo, e se c'era qualcosa di più che avrei voluto da questo oggetto, giungendo alla conclusione che non doveva essere nient'altro che un contenitore d'acqua e un piano di appoggio. Tra le possibili soluzioni estetiche avevo un'unica priorità: ridurre all'essenziale quei pochi gesti necessari per ottenere un oggetto semplice e chiaro nella combinazione delle forme funzionali, affinché il risultato fosse il più possibile fedele all'idea che avevo in mente.

Allo stesso modo ho lavorato alla creazione del catalogo, per il quale sono ricorso a immagini che ignorano e scavalcano la realtà... immagini prive del racconto di una vicenda, dove non esiste più né un tempo definito, né un luogo (il bagno), ma soltanto la perfetta coincidenza tra l'idea iniziale e la forma finale del progetto.

When the company asked me to design a washbasin, they gave me the freedom to design without restrictions. An important challenge, because there is nothing more complex than designing without conditions.

Even if the task was to design a functional ceramic object, it was very difficult to design without knowing the meaning of what I had to give shape. I started wondering what a washbasin was for me, what its use was, and if there was anything more I wanted from this object. I came to the conclusion that it did not need to be more than a water container and a flat surface to support it. From the various possible aesthetic solutions, I had a single priority: to reduce the design to the essentials, with the fewest necessary components, in order to obtain a simple and straightforward product.

In this same way I worked on the creation of this catalog, for which I used images that overlook and overcome reality ... images without a narrative, where there is no longer a defined time, nor a place (the bathroom), but only the perfect combination between the initial idea and the final form of the project.

Il sistema SKYLAND

Skyland system

Il progetto SKYLAND è stato concepito come un sistema : un insieme di tre elementi coordinati tra loro in una unità funzionale, dove il ruolo protagonista è assunto da una lastra di ceramica sulla quale il segno perfetto del cerchio (sky) è sottratto ad un piano quadrato (land).

Esaltata nei suoi spessori minimi dal contrasto con la massa delle basi in pietra o in legno dalle quali si eleva, la ceramica assume la leggerezza di un foglio di carta con l'ambizione di voler separare la forma dalla materia.

Alle esili strutture metalliche è affidato il ruolo di sostegno dell'intero sistema, nel quale i tre elementi che lo compongono per la loro giustapposizione conservano inalterati il senso e la funzione oltreché essere perfettamente leggibili nella loro forma.

Separati l'uno dall'altro da pochi millimetri grazie a dettagli costruttivi raffinati, gli elementi hanno forme pure su cui la geometria esercita un potere magnetico di combinazione quasi spontaneo, se non inevitabile. Le proporzioni adottate creano inoltre legami invisibili, permettendo una libera scelta di posizione e combinazione dei materiali e delle finiture, tal volta anche contrastanti, offrendo al tempo stesso un'ampia flessibilità ai limiti dimensionali dettati solo dallo spazio da occupare.

The project was conceived as a system: a set of three coordinated elements in one functional unit, where the protagonist role is clad by a ceramic plate on which sits the perfect sign, a circle (sky), is subtracted from a square base (land). Exalted in its thinness, contrasting with the mass of stone or wood base from which it rises, the ceramic takes on the lightness of a sheet of paper with the ambition of separating the shape from the material. A thin metal structure has been entrusted to support the entire system, in which the three elements are juxtaposed to retain their original purpose, perfectly legible in their form. Separated from each other by a few millimeters, thanks to refined construction details, the elements have pure shapes on which geometry exerts an almost spontaneous magnetic power. The proportions create invisible bonds, allowing a free choice of position and combination of materials and finishes, with great flexibility bound only by the dimensional limit of space.

Giancarlo Angelelli

Architetto, nasce a Civita Castellana (VT) nel 1968. Laureato con lode alla facoltà di Architettura dell'Università di Roma "La Sapienza". Nel 2002 apre un proprio studio. Nella sua attività professionale si è occupato di restauro e progettazione esplorando di quest'ultima vari temi : residenza privata, scuola pubblica, allestimenti e spazi commerciali. Dal 2010 vive e lavora tra Civita Castellana e Milano. Nel 2013 vince il concorso internazionale per la progettazione del nuovo polo scolastico di Vada Ligure (SV). Dal 2016 collabora con la ceramica AXAone per la quale ha disegnato la serie SKYLAND.

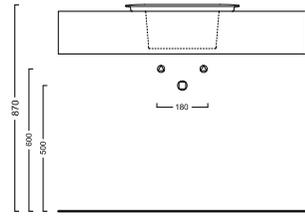

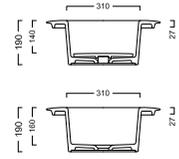

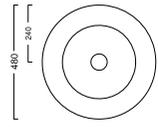

Architect, born in Civita Castellana (VT) in 1968. Graduated with praise from the Faculty of Architecture at the University of Rome "La Sapienza". In 2002 he opened his own studio. In his professional career he has been involved in restoration and design exploring various themes: private residences, public schools, trade show stalls and commercial spaces. Since 2010 he spends his time between Civita Castellana and Milan. In 2013, he won the international competition for the design of the new school of Vada Ligure (SV). Since 2016, he has worked with AXAone ceramics, for which he designed the SKYLAND series
